

## FOLDING CANOES

The ALLY folding canoe is developed and manufactured in Norway. Its low weight, great flexibility and durable construction have made it the choice of expeditions worldwide.

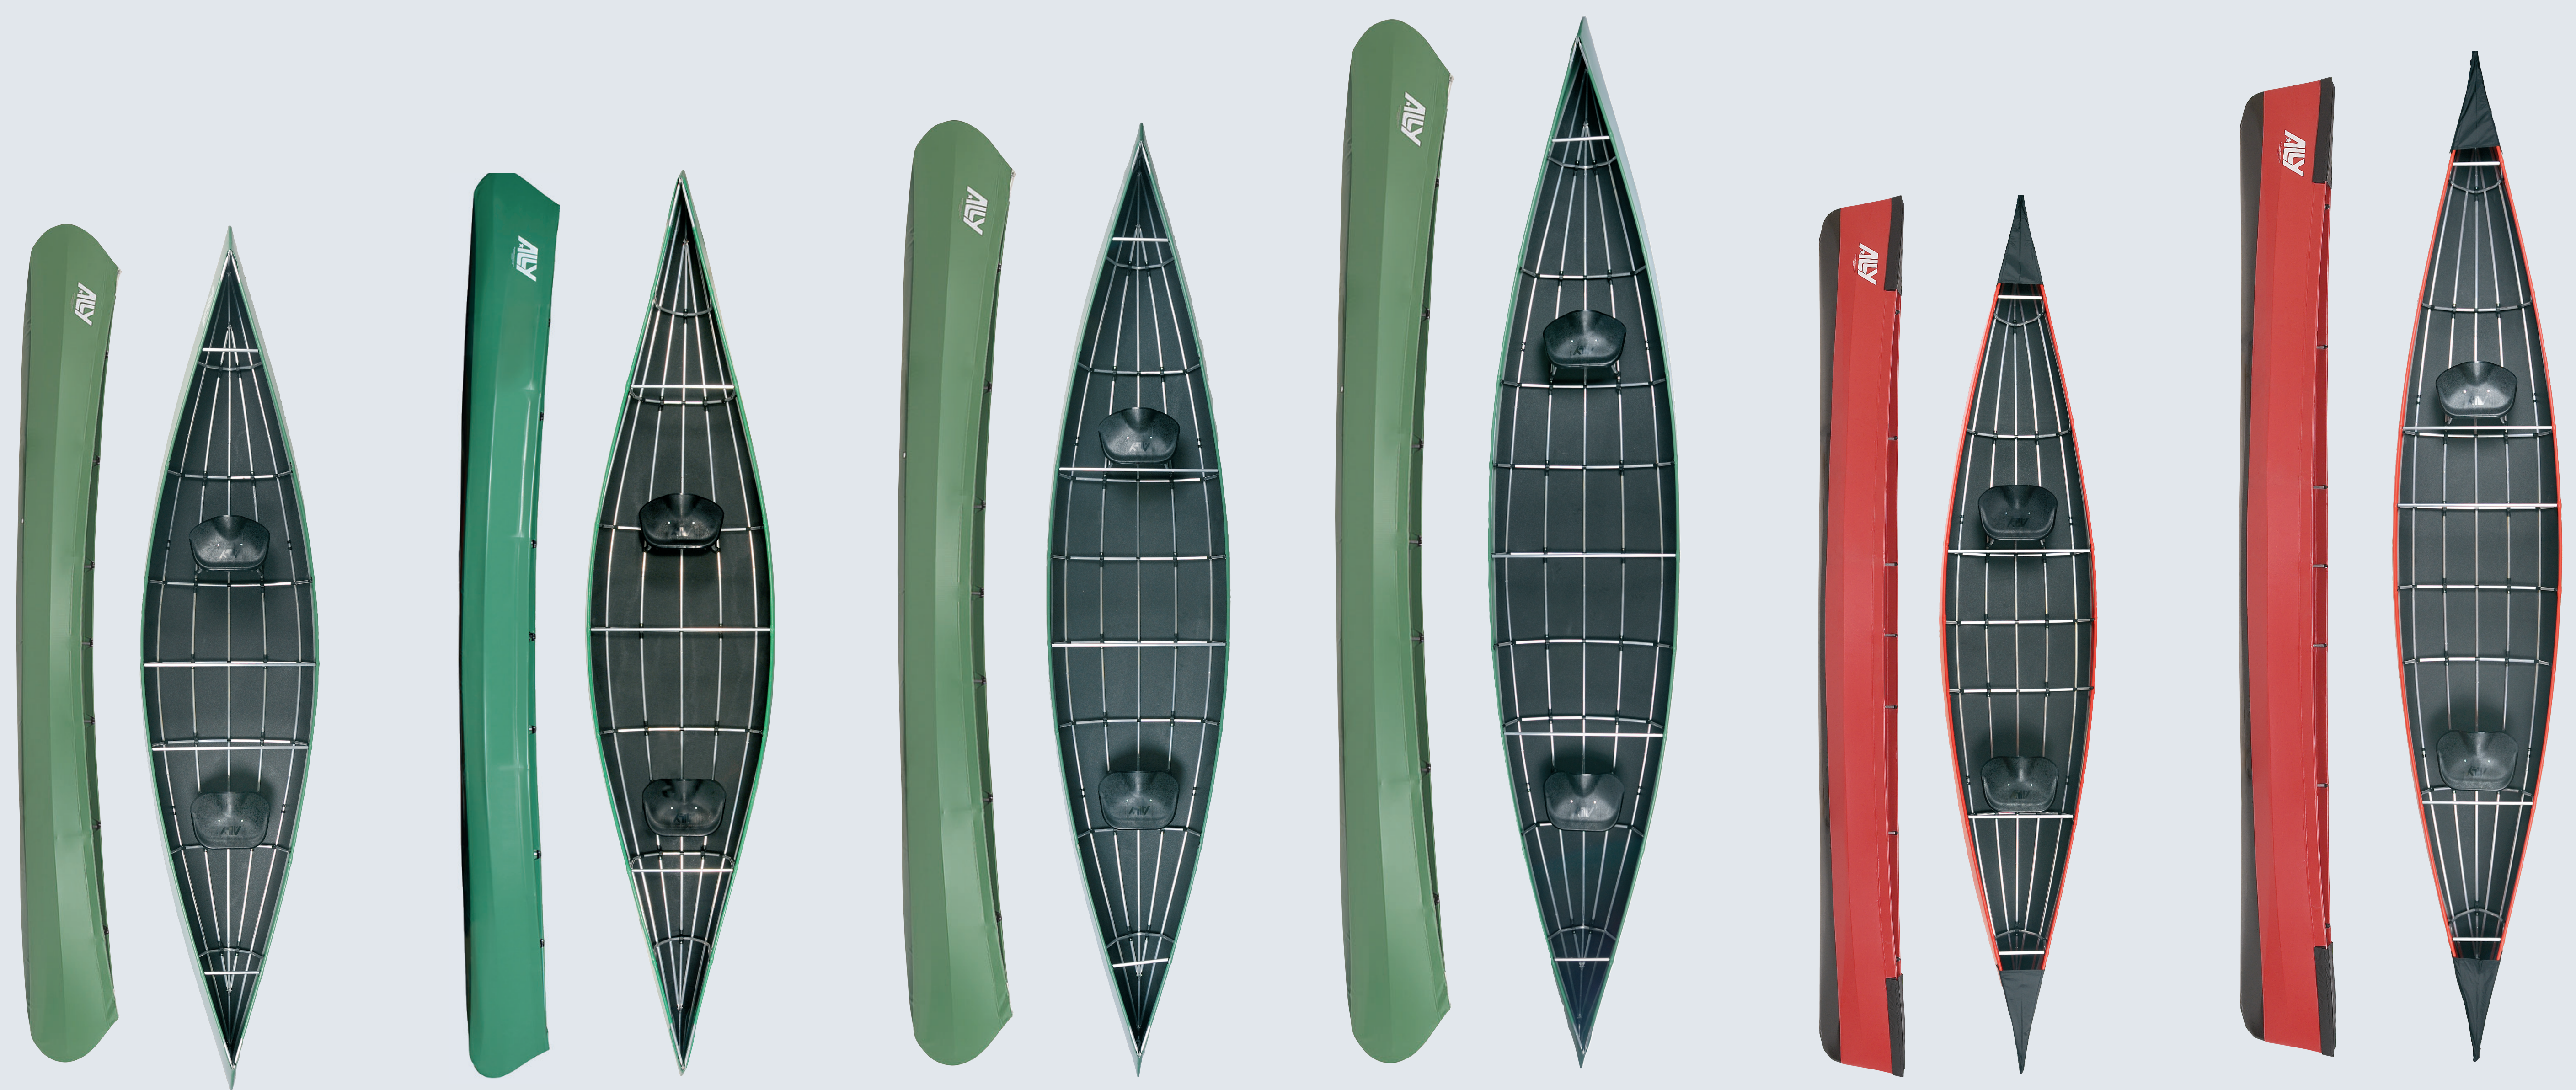

The canoe's flexibility allows it to ride over waves rather than crash into them. Its flexibility also makes encounters with underwater rocks a much less harrowing experience than when riding in a canoe of fiberglass.

### ALLROUND

Allround canoes have a slightly curved keel line and a tall, curved bow and stern. They offer great stability and loading capacity, and are ideal for trips and expeditions. They are easy to manoeuvre in rivers and rapids, but are just as good for flatwater paddling. Available in green.

### FLATWATER

Flatwater canoes are designed for speed and directional stability. They have a straight keel and the bow and stern are straight, pointed and low. They cut through the water without any noticeable deviation caused by crosswinds. These canoes are significantly narrower than the all-round canoes. Beginners will need some time to adjust, but if the canoe is primarily used on flat, calm water, even beginners will get much enjoyment from a flatwater canoe. Available in green and red.

611 Ally 15' DR

This is the "classical" ALLY canoe, easy to maneuver and with high stability. The keel-line is slightly arched which makes the canoe easy to maneuver under all conditions, especially when paddling white water with technical difficulties.

817 Ally 16' DR

This canoe is easily paddled, steady and has surprisingly good directional stability, which in the first instance is due to a long, straight keel line. The stems are drawn a little longer down and are narrower than the other all-round models, which means that the canoe cuts through waves and glides exceptionally well on the water.

811 Ally 16,5' DR

The canoe for those who need large carry capacity combined with high stability, ALLY 16,5' DR has the same shape as 15' DR but a longer, less rockered keel line, which increases directional stability. For years the 16,5' DR has been the first choice of expeditions all over the world. This canoe has been paddled in heavy white water and on rivers with great technical difficulties.

711 Ally 18' DR

This big canoe has the same shape as 15' DR and 16,5' DR. With a length of 18 feet, it has a wide and long, flat bottom and tumblehome shape. This makes it exceptionally stable, highly buoyant at the bow and it features a very high load capacity.

This is a canoe for those who need to carry a lot of gear, in a stable boat. It easily carries 3-4 adults with baggage.

515 Ally 15,5' DR

The canoe is relatively short and has a low profile, making it harder for wind to get hold. The design and size makes it an excellent solo-canoe on lakes and quiet rivers. This is a fast, easily maneuverable canoe.

815 Ally 17' DR

ALLY 17' is a fast canoe that very well matches up to the fastest fiberglass or kevlar canoes. The tumblehome bottom profile and straight keel line makes it tracks straighter in the waves providing excellent side stability. The low profile and the straight bow and stern make it difficult for the wind to get hold of the canoe. The result is superior directional stability under severe conditions.

Length: 450 cm / 14' 10"  
Width: 94 cm / 37"  
Width gunwale: 91 cm / 36"  
Width waterline: 84 cm / 33"

Capacity: 390 kg / 860 lbs

WILD PROJECT

### Benefits of choosing an Ally Canoe

- It is lightweight and foldable, which makes it easy to transport/carry long distances
- The flotation mat is heat-insulating and shock-absorbing, ensuring that the canoe remains afloat in any situation
- The flexible construction absorbs shocks from collisions or choppy waves
- The reinforced skin is robust enough to handle impacts from rocks and other obstacles
- Very versatile and easy to paddle in all conditions
- Adjustable seats, even lengthwise, so the point of gravity can be adjusted as needed
- Ally also has a high carrying capacity, which makes it the ideal family canoe
- Norwegian design, construction and production
